Quiz Result For "Deep Learning Quiz" Is Here -

🕒 Total Question - 20

📄 Total Attempts - 20

✅ Total Correct - 20

❌ Total Incorrect - 0

🕒 Duration - 20Minutes

📊 Passing Percentage - 70%

📊 Your Percentage - 100.0%

Q1. What is the primary difference between deep learning and traditional machine learning?

- 1) Deep learning uses structured data, while traditional machine learning uses unstructured data.
- 2) Deep learning requires manual feature extraction, while traditional machine learning does not.
- 3) Deep learning uses neural networks to automatically extract features, while traditional machine learning relies on handcrafted features.
- 4) Deep learning is only used for image processing, while traditional machine learning is used for all other tasks.

Your Answer: 3) ✓

Deep learning uses neural networks to automatically extract features, while traditional machine learning relies on handcrafted features.

Correct Answer: 3)

Deep learning uses neural networks to automatically extract features, while traditional machine learning relies on handcrafted features.

Q2. Which of the following is a key component of a neural network?

- 1) Decision Trees
- 2) Perceptrons
- 3) Support Vector Machines
- 4) K-Means Clustering

Your Answer: 2) ✓

Perceptrons

Correct Answer: 2)

Perceptrons

Q3. What is the purpose of an activation function in a neural network?

- 1) To reduce the dimensionality of the input data.
- 2) To introduce non-linearity into the model.
- 3) To normalize the input data.
- 4) To initialize the weights of the network.

Your Answer: 2) ✓

To introduce non-linearity into the model.

Correct Answer: 2)

To introduce non-linearity into the model.

Q4. What is the main goal of forward propagation in a neural network?

- 1) To adjust the weights of the network to minimize errors.
- 2) To make predictions using the current weights.
- 3) To calculate the loss function.
- 4) To regularize the model and prevent overfitting.

Your Answer: 2) ✓

To make predictions using the current weights.

Correct Answer: 2)

To make predictions using the current weights.

Q5. Which of the following is a common challenge in deep learning?

- 1) Lack of computational resources.
- 2) Overfitting due to small datasets.
- 3) Difficulty in interpreting model decisions.
- 4) All of the above.

Your Answer: 4) ✓

All of the above.

Correct Answer: 4)

All of the above.

Q6. What is the role of a loss function in training a neural network?

- 1) To measure the performance of the model.
- 2) To initialize the weights of the network.
- 3) To introduce non-linearity into the model.
- 4) To reduce the dimensionality of the input data.

Your Answer: 1) ✓

To measure the performance of the model.

Correct Answer: 1)

To measure the performance of the model.

Q7. Which optimizer is commonly used to train deep learning models?

- 1) Gradient Descent
- 2) Random Forest
- 3) K-Means
- 4) Principal Component Analysis (PCA)

Your Answer: 1) ✓

Gradient Descent

Correct Answer: 1)

Gradient Descent

Q8. What is the purpose of dropout in a neural network?

- 1) To increase the model's capacity.
- 2) To reduce overfitting by randomly deactivating neurons during training.
- 3) To speed up the training process.
- 4) To normalize the input data.

Your Answer: 2) ✓

To reduce overfitting by randomly deactivating neurons during training.

Correct Answer: 2)

To reduce overfitting by randomly deactivating neurons during training.

Q9. Which of the following is an application of Convolutional Neural Networks (CNNs)?

- 1) Time series prediction.
- 2) Image classification.
- 3) Text generation.
- 4) Clustering.

Your Answer: 2) ✓

Image classification.

Correct Answer: 2)

Image classification.

Q10. What is the primary advantage of using LSTMs over traditional RNNs?

- 1) LSTMs are faster to train.
- 2) LSTMs can handle long-term dependencies better.
- 3) LSTMs require less data.
- 4) LSTMs are easier to interpret.

Your Answer: 2) ✓

LSTMs can handle long-term dependencies better.

Correct Answer: 2)

LSTMs can handle long-term dependencies better.

Q11. What is the vanishing gradient problem in RNNs?

- 1) Gradients become too large, causing unstable training.
- 2) Gradients become too small, slowing down or stopping learning.
- 3) Gradients are not calculated correctly.
- 4) Gradients are not used in RNNs.

Your Answer: 2) ✓

Gradients become too small, slowing down or stopping learning.

Correct Answer: 2)

Gradients become too small, slowing down or stopping learning.

Q12. Which of the following is a key component of an LSTM?

- 1) Decision Gate
- 2) Memory Cell
- 3) Support Vector
- 4) Kernel Function

Your Answer: 2) ✓

Memory Cell

Correct Answer: 2)

Memory Cell

Q13. What is the purpose of pooling layers in a CNN?

- 1) To reduce the spatial dimensions of the feature maps.
- 2) To introduce non-linearity into the model.
- 3) To initialize the weights of the network.
- 4) To calculate the loss function.

Your Answer: 1) ✓

To reduce the spatial dimensions of the feature maps.

Correct Answer: 1)

To reduce the spatial dimensions of the feature maps.

Q14. Which of the following is a common regularization technique in deep learning?

- 1) Dropout
- 2) Gradient Descent
- 3) Activation Functions
- 4) Convolution

Your Answer: 1) ✓

Dropout

Correct Answer: 1)

Dropout

Q15. What is the primary purpose of backward propagation in a neural network?

- 1) To make predictions using the current weights.
- 2) To adjust the weights of the network to minimize errors.
- 3) To calculate the loss function.
- 4) To regularize the model and prevent overfitting.

Your Answer: 2) ✓

To adjust the weights of the network to minimize errors.

Correct Answer: 2)

To adjust the weights of the network to minimize errors.

Q16. Which of the following datasets is commonly used for image classification tasks?

- 1) CIFAR-10
- 2) MNIST
- 3) Fashion-MNIST
- 4) All of the above

Your Answer: 4) ✓

All of the above

Correct Answer: 4)

All of the above

Q17. What is the main advantage of using GRUs over LSTMs?

- 1) GRUs are computationally more efficient.
- 2) GRUs have more parameters.
- 3) GRUs are easier to interpret.
- 4) GRUs are better at handling long-term dependencies.

Your Answer: 1) ✓

GRUs are computationally more efficient.

Correct Answer: 1)

GRUs are computationally more efficient.

Q18. Which of the following is a common application of RNNs?

- 1) Image classification.
- 2) Time series prediction.

3) Clustering.

4) Dimensionality reduction.

Your Answer: 2) ✓

Time series prediction.

Correct Answer: 2)

Time series prediction.

Q19. What is the primary purpose of data augmentation in deep learning?

1) To reduce the size of the dataset.

2) To increase the diversity of the training data and reduce overfitting.

3) To speed up the training process.

4) To normalize the input data.

Your Answer: 2) ✓

To increase the diversity of the training data and reduce overfitting.

Correct Answer: 2)

To increase the diversity of the training data and reduce overfitting.

Q20. Which of the following is a key challenge in training deep learning models?

1) High computational costs.

2) Difficulty in interpreting model decisions.

3) Overfitting due to small datasets.

4) All of the above.

Your Answer: 4) ✓

All of the above.

Correct Answer: 4)

All of the above.
